

*Subc1* 17. (Amended) The expandable medical device according to Claim 7, wherein the elongated beams further include a plurality of apertures disposed therein, and a beneficial agent is disposed within the apertures.

*Subc1* 20. (Amended) The expandable medical device according to Claim 1, wherein the elongated beams further includes a plurality of apertures disposed therein, and a beneficial agent is disposed within the apertures.

Please add new Claims 44-47 as follows:

*Subc1* 44. (New) The expandable medical device according to Claim 23, wherein the plurality of hinges have hinge widths which are smaller than widths of the elongated struts.

*A4* 45. (New) The expandable medical device according to Claim 27, wherein the device is balloon expandable from a first diameter to a second diameter at which the locking feature locks the expanded body in the expanded position.

46. (New) The expandable medical device according to Claim 1, wherein an instant center of rotation changes along the length of the hinges during expansion from the first diameter to the second diameter.

47. (New) The expandable medical device according to Claim 1, wherein the pawl moves in at least one rotational and one translational degree of freedom during expansion from the first diameter to the second diameter.
